PROFESSIONAL SUMMARY

Final-year B.Tech Computer Engineering student with hands-on experience building AI-powered and agentic systems, including LLM tool-calling architectures, generative AI integrations, and full-stack backend development. Proficient in Python, FastAPI, Flask, JavaScript, and SQL; experienced with LLM tooling (Ollama, Qwen), Git/GitHub, and cloud fundamentals. Proven ability to independently design, build, and ship end-to-end AI applications from data pipeline to deployment. Seeking an AI Engineer role to apply machine learning, LLM integration, and software engineering skills to build intelligent, production-grade systems.

EDUCATION

Amritsar Group of Colleges – Amritsar, Punjab

Aug 2023 – May 2027

B.Tech, Computer Engineering |

Relevant Coursework: Software Engineering · Data Structures & Algorithms · Web Technologies · Database Systems · Cloud Computing (IIT Kharagpur) · Operating Systems

TECHNICAL SKILLS

Programming Languages: Python · Java · JavaScript · C++ · SQL

Frontend Technologies: HTML5 · CSS3 · JavaScript · React.js (basic) · Responsive Design

Backend Technologies: Flask (Python) · FastAPI · Node.js (familiar)

Databases: MySQL · Firebase · PostgreSQL (familiar) · SQL query design

AI/ML & LLM Tools: Ollama · Qwen (LLMs) · Agentic AI / Tool-Calling Architectures · Prompt Engineering · Generative AI APIs · Pandas · NumPy

Tools & Platforms: Git · GitHub · Docker (basic) · AWS/Cloud Fundamentals · Linux · Jupyter · VS Code

EXPERIENCE

Python AI/ML Developer Intern – Solitaire Infosys, Mohali

Jun 2024 – Jul 2024 (6 Weeks)

- Developed and tested Python-based backend modules; worked within a structured software engineering environment following modular design and version control practices with Git/GitHub.
- Built data-processing pipelines using Pandas and NumPy to clean, transform, and serve structured datasets — skills directly applicable to backend API data handling.
- Produced EDA reports and visualizations using Matplotlib/Seaborn; collaborated with senior engineers on documentation and delivery, strengthening professional software development workflow.

PROJECTS

Women Safety Application – Full-Stack Web & Mobile Backend

Apr 2026 – Jun 2026

- Architected and built a Python/Flask REST API backend serving real-time location tracking and emergency-alert endpoints; designed JSON API contracts consumed by the Android frontend.
- Integrated geospatial data processing on the server side with threshold-based trigger logic; applied modular MVC-style design for maintainability and scalability.
- Managed version control with Git/GitHub throughout the project lifecycle; deployed the backend as a standalone web service, demonstrating end-to-end web application development.

Smartflix – Movie Recommendation Web App

Jun 2025 – Jul 2025

- Designed a full-stack recommendation application with a Python backend serving REST API endpoints and an HTML/CSS/JavaScript frontend for user interaction and result display.
- Engineered backend data pipelines processing a 10,000+ entry metadata corpus; implemented cosine-similarity and matrixfactorization algorithms exposed via RESTful API routes.
- Structured data storage and retrieval using SQL-compatible data formats; evaluated system response quality iteratively, optimizing both backend performance and frontend rendering speed.

AdmitAI – AI-Integrated College Admission Website (In Progress)

2026

- Designed and integrated a custom agentic AI chatbot into a live college admission website using Ollama (Qwen), Python, and FastAPI — enabling the LLM to autonomously select and chain 15+ custom tools for real-time course, fee, and eligibility queries instead of relying on static or RAG-based responses.

- Built a lead-capture chat widget (HTML5, CSS3, JavaScript) with a counselor-facing admin dashboard, integrating Supabase (PostgreSQL) for structured data storage and duplicate-prevention logic; managed codebase on GitHub with clean commit history.
- Engineered reliability safeguards for LLM-generated output, including fuzzy string matching for entity resolution, deterministic Python-based calculations for financial data (replacing unreliable model-generated arithmetic), and scope-restriction guardrails to prevent off-topic or fabricated responses.

AI Interview Preparation Assistant– Full Stack Web Application

2026

- Developed an AI-powered interview preparation platform that generates role-specific technical and HR interview questions based on user profiles and uploaded resumes..
- Integrated generative AI APIs to provide personalized feedback, answer evaluation, and interview readiness insights while maintaining an intuitive and responsive user experience.
- Implemented user authentication, progress tracking, and cloud-based data storage using Firebase/Supabase; utilized GitHub for version control and collaborative development workflows.

CERTIFICATIONS

- Cloud Computing – IIT Kharagpur (NPTEL) | 2026
- Software Engineering – IIT Kharagpur (NPTEL) | 2025
- Introduction to Machine Learning – IIT Madras (NPTEL) | 2026
- Deep Learning for Developers – Infosys Springboard | 2026
- Python AI / Machine Learning – VMM Education | 2024

HACKATHONS & ACHIEVEMENTS

- 2nd Place – MindSpace Hackathon: Designed and shipped a working web-based AI solution within a constraint; demonstrated rapid full-stack prototyping and cross-functional collaboration.
- Participant – UIDAI Aadhaar Hackathon: Contributed to a national government-sponsored hackathon on data privacy and identity systems, applying AI/ML concepts.
